

# Perimeter

Perimeter is the distance around a two-dimensional shape.

Example: the perimeter of this rectangle is  **$7+3+7+3 = 20$**

Perimeter  
*The distance around an object*

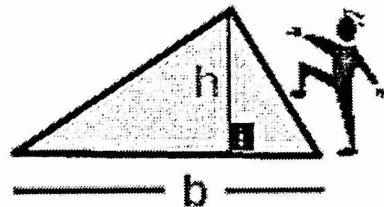

$$\text{Perimeter} = 5\text{cm} + 7\text{cm} + 5\text{cm} + 6\text{cm} + 7\text{cm} = 30\text{cm}$$

# Area Formulas

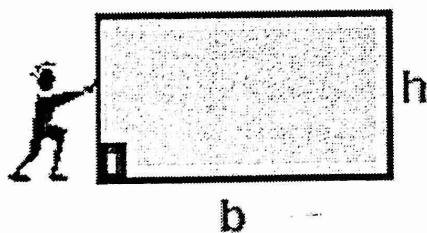

Note: "ab" means "a" multiplied by "b". "a<sup>2</sup>" means "a squared", which is the same as "a" times "a".

Be careful!! Units count.

*Area (triangle)*

$$A = \frac{1}{2}bh$$

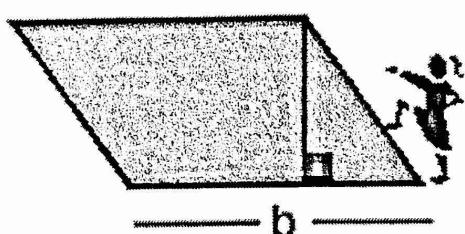

*Area (rectangle)*

$$A = bh$$

or

$$\text{Area (rectangle)} = (\text{length}) \cdot (\text{width})$$

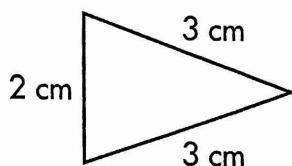

*Area (parallelogram)*

$$A = bh$$

## Lesson 8.II Perimeter

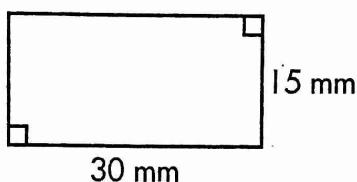

The **perimeter** of a figure is the distance around it.

When all side lengths are known, you can just add them.

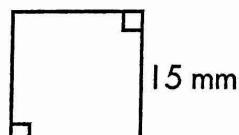

$$P = s + s + s = 2 + 3 + 3 \\ P = 8 \text{ cm}$$

When you know that certain sides are equal, you can calculate missing side lengths.

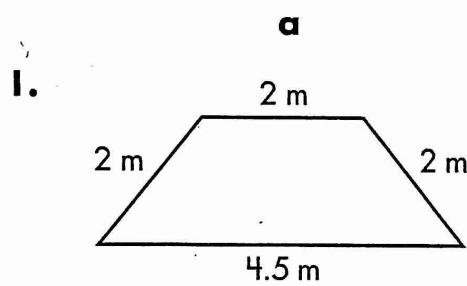

$$P = 2\ell + 2W \text{ or } 2(\ell + W) \\ P = 2(15 + 30) \\ P = 90 \text{ mm}$$

If a polygon is **regular**, meaning that all sides are equal in length, you can multiply the length of one side by the number of sides.

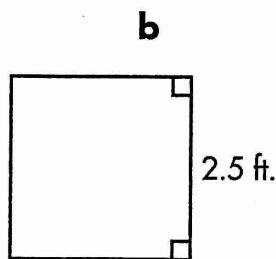

$$P = 4s \\ P = 4 \times 15 = 60 \text{ mm}$$

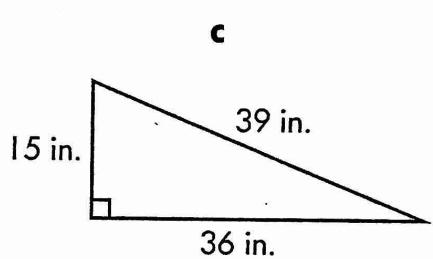

Find the perimeter of each figure. Unless shown otherwise, assume each figure is regular.

## Lesson 8.2 Area of a Rectangle

The **area** of a figure is the number of square units inside that figure. Area is expressed in **square units** or **units<sup>2</sup>**.

The area of a rectangle is the product of its length and its width.

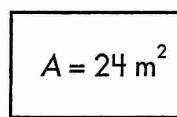

$$\begin{aligned} A &= \ell \times w \\ A &= 5 \times 10 = 50 \text{ cm}^2 \end{aligned}$$

$$\begin{aligned} A &= 5 \times 5 \\ A &= 5 \times 5 \text{ or } 5^2 \\ A &= 25 \text{ cm}^2 \end{aligned}$$

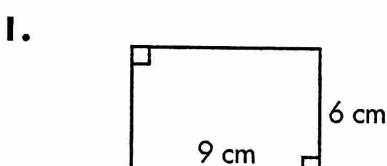

If you know the area of a rectangle and either its length or its width, you can determine the unknown measure.

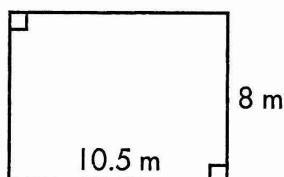

$$\begin{aligned} A &= \ell \times w \\ 24 &= 6 \times w \\ \frac{24}{6} &= \frac{6w}{6} \quad 4 = w \end{aligned}$$

The width is 4 meters.

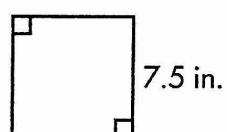

Find the unknown measure for each rectangle below.

**a**

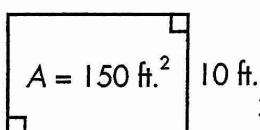

area = \_\_\_\_\_  $\text{cm}^2$

**b**

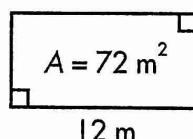

area = \_\_\_\_\_  $\text{m}^2$

**c**

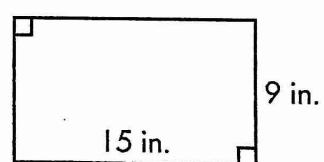

area = \_\_\_\_\_  $\text{in.}^2$

**2.**

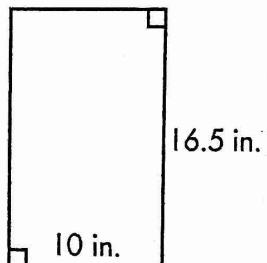

length = \_\_\_\_\_ ft.

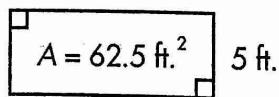

width = \_\_\_\_\_ m

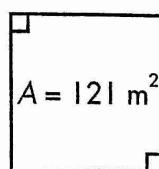

area = \_\_\_\_\_  $\text{in.}^2$

**3.**

area = \_\_\_\_\_  $\text{in.}^2$

length = \_\_\_\_\_ ft.

side = \_\_\_\_\_ m

**Lesson 8.31** Area of a Triangle

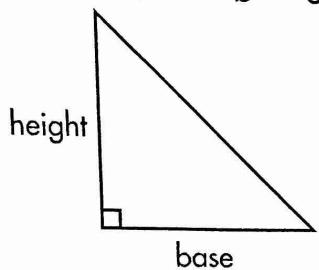

To find the area of a triangle, find  $\frac{1}{2}$  the product of the measure of its base and its height.

$$A = \frac{1}{2} \times b \times h$$

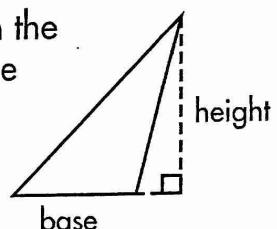

$b = 6$  in. and  $h = 8$  in.

Find A.

$$\begin{aligned} A &= \frac{1}{2} \times b \times h \\ A &= \frac{1}{2} \times 6 \times 8 \\ A &= 24 \text{ in.}^2 \end{aligned}$$

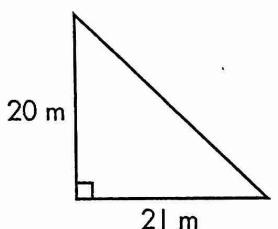

The height is the distance from the base to the highest point on the triangle, using a line perpendicular to the base.

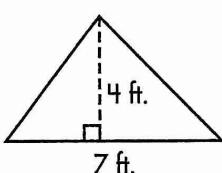

Find the area of each triangle.

1.

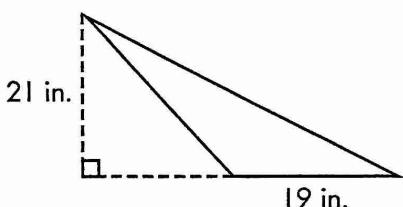

$$\text{area} = \underline{\hspace{2cm}} \text{ m}^2$$

b

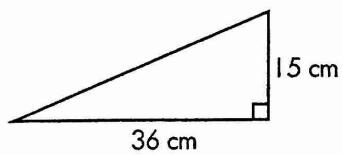

$$\text{area} = \underline{\hspace{2cm}} \text{ ft.}^2$$

c

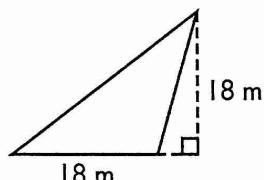

$$\text{area} = \underline{\hspace{2cm}} \text{ in.}^2$$

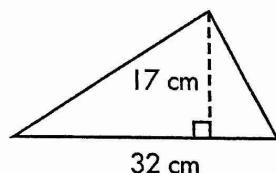

2.

$$\text{area} = \underline{\hspace{2cm}} \text{ cm}^2$$

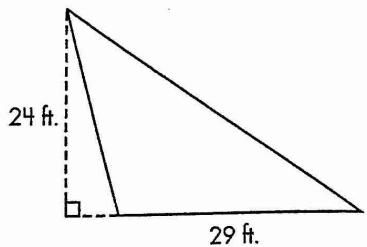

$$\text{area} = \underline{\hspace{2cm}} \text{ m}^2$$

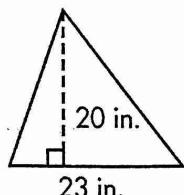

$$\text{area} = \underline{\hspace{2cm}} \text{ cm}^2$$

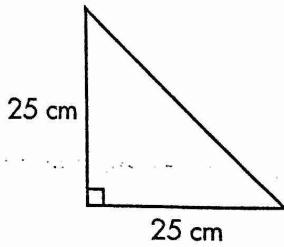

3.

$$\text{area} = \underline{\hspace{2cm}} \text{ ft.}^2$$

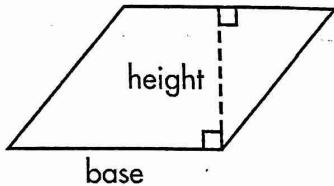

$$\text{area} = \underline{\hspace{2cm}} \text{ in.}^2$$

$$\text{area} = \underline{\hspace{2cm}} \text{ cm}^2$$

**Lesson 8.6** Area of a Parallelogram

A parallelogram is a polygon with 2 sets of parallel sides. To find the **area** of a parallelogram, multiply the measure of its base by the measure of its height:  $A = b \times h$  or  $A = bh$ .

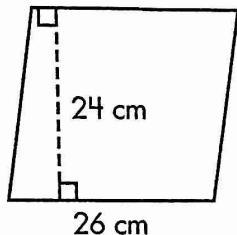

$b = 8$  in. and  $h = 7$  in. What is  $A$ ?

$$A = b \times h \quad A = 8 \times 7 = 56 \text{ in.}^2 \text{ or } 56 \text{ square inches.}$$

Find the area of each parallelogram.

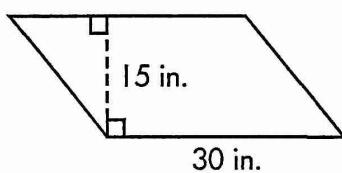

1.

$$\text{area} = \underline{\hspace{2cm}} \text{ cm}^2$$

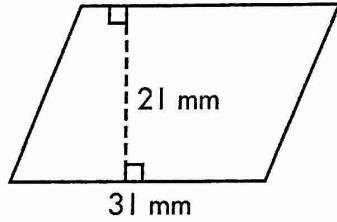

a

b

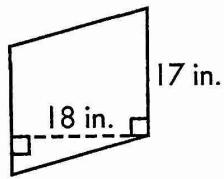

$$\text{area} = \underline{\hspace{2cm}} \text{ in.}^2$$

c

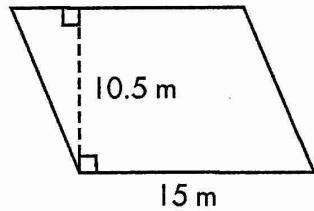

$$\text{area} = \underline{\hspace{2cm}} \text{ mm}^2$$

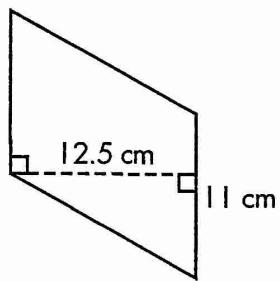

2.

$$\text{area} = \underline{\hspace{2cm}} \text{ in.}^2$$

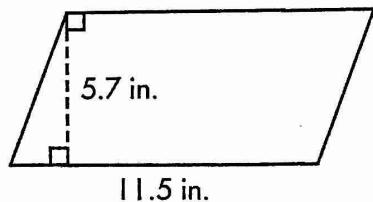

$$\text{area} = \underline{\hspace{2cm}} \text{ m}^2$$

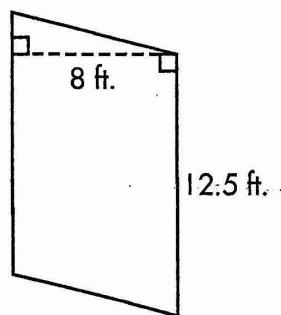

$$\text{area} = \underline{\hspace{2cm}} \text{ cm}^2$$

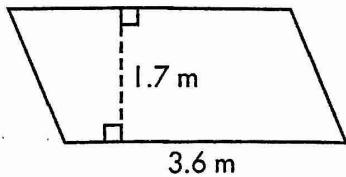

3.

$$\text{area} = \underline{\hspace{2cm}} \text{ in.}^2$$

$$\text{area} = \underline{\hspace{2cm}} \text{ ft.}^2$$

$$\text{area} = \underline{\hspace{2cm}} \text{ m}^2$$
